NO-SCALPEL VASECTOMY INSTRUMENTS

No-Scalpel Vasectomy is rapidly becoming the choice method of surgical contraception in North America. It is a time efficient procedure, which has been proven to be less traumatic to your patient, with less bleeding, less post-operative infection, less pain. It is also less costly to the health care system than female contraception as it can be performed in your office under local anaesthetic.

We are happy to be able to offer you the opportunity to purchase superior quality instruments. A No-Scalpel instrument set includes a 4.0 mm vas grasping forceps and specially designed dissecting forceps, modeled after the original Chinese design. If you would be interested in purchasing one or more sets of these instruments, please contact the address above.

If you would like more information on these instruments, or would like to place an order, please complete the form below.

Each set of instruments
 (grasping forceps and dissecting forceps)
 is \$100.00 CDN (includes G.S.T., handling and delivery)
